

# **Wash your hands regularly and cover coughs and sneezes**

Wash your hands with soap and water or use hand sanitiser regularly throughout the day. Regular hand washing is an effective way to reduce your risk of catching illnesses, including COVID-19.

It is particularly important to wash your hands:

- after coughing, sneezing and blowing your nose
- before you eat or handle food
- after coming into contact with surfaces touched by many others, such as handles, handrails and light switches
- after coming into contact with shared areas such as kitchens and bathrooms
- when you return home

Where possible, avoid touching your eyes, nose and mouth. If you do need to touch your face, for example to put on or take off your face covering, wash or sanitise your hands before and after.

Coughing and sneezing increases the number of droplets and aerosols released by a person, the distance they travel and the time they stay in the air. Covering coughs and sneezes will help reduce the spread of particles carrying COVID-19 and other viruses, including those that cause coughs and colds.
